

GHG Accounting Strategies Redefined

Does your current practice put you at a competitive disadvantage?

Move away from an excel-based approach and integrate energy, carbon, and sustainability data with one automated system - ecolink®. Where decentralized spreadsheet systems are inadequate, ecolink® thrives providing accuracy, dynamic analytics, audit trails, and effective communication with stakeholders. As a turnkey, software-based service solution, ecolink® gives decision-makers confidence in the data integrity and creates line of sight to key business information to meet diverse industry pressures.

 Spreadsheet Approach

Insightful management perspective Empowers program management with line of sight to key performance metrics, which drive strategic planning initiatives and shared best practices		
SAS70 certified data management Applies proven data management processes with rigorous QA/QC, building trust and removing practices that are error prone & duplicative		
Dynamic web-based analytics Yields near real-time GHG emissions intelligence with automated data collection & management that can be shared across the organization		
Transparent records Stores and organizes critical records within a secure, electronic environment for easy transmittal to auditors & verifiers		
Compliant with regulatory mandates Provides for compilation and electronic transmittal of GHG records in a format supported by EPA		
Resource efficiency Reduces burden on internal resources, allowing management to focus on core business issues		
Cost-effective and scalable Leverages 30 years of energy & environmental data management scale and experience at over 9,000 facilities world-wide
