

ecolink[®]

Helping Clients Make Important Decisions

Centralizing core energy, carbon, and environmental metrics within a management platform like ecolink[®] allows organizations to create direct cost savings, avoid compliance penalties, and establish competitive advantages.

ecolink[®] is an enterprise carbon and sustainability management platform designed to support regulatory and voluntary needs. Delivered through a secure, web-based platform, ecolink[®] provides organizations with a centralized data platform for evaluating environmental performance across the company. ecolink[®] delivers sustainability project management tools, managerial capabilities, and transparent reporting for communication with stakeholders.

Features & Benefits

Regulatory-quality Reporting

Comprehensive GHG inventories designed to meet various regulatory requirements, including EPA's mandatory GHG reporting rules, the U.K. Carbon Reduction Commitment, state-level programs and others

Sustainability Initiatives

Organize and mitigate environmental metrics such as water, waste, and supply chain impacts in addition to energy and carbon on a single platform to participate in the Global Reporting Initiative (GRI) and Dow Jones Sustainability Index

Project Evaluation & Management

Identify, evaluate, and manage energy efficiency, emission reduction, and sustainability project opportunities

Integrated Data Platform

Centralized carbon, energy, and environmental data with proven, data capture processes compatible with any client accounting systems

Transparent Reporting

Effectively communicate essential carbon, energy, and environmental information to internal and external stakeholders

Voluntary GHG Reporting

Built-in methodologies and protocols to support carbon and sustainability disclosure to leading programs, including WRI GHG Accounting, the Carbon Disclosure Project (CDP), The Climate Registry (TCR), and EPA Climate Leaders

Respond to Audits

Standard, exportable validation reports detailing data sources, methodologies, emission factors, and calculations. Pace will support your company through the audit process

Managerial Oversight

Provide stakeholders with efficient access to key energy, carbon, and sustainability metrics for effective strategic planning and asset management

Insightful GHG Inventory

Organize and graphically analyze essential data, establish key drivers, and evaluate trends to develop strategic carbon and energy planning

Record Retention

Deployed through a secure web-based platform that serves as a warehouse for long-term storage of inventory records
