

Pace Global Redefines Energy and Carbon Management with ECM HubSM

Integrated energy and carbon data management system provides critical management perspective for commercial, industrial, and institutional customers. Users gain a competitive advantage through reducing energy costs, controlling energy demand, and meeting sustainability objectives.

FAIRFAX, VA – April 14, 2010 – Pace Global Energy Services, LLC ('Pace Global') today announced its integrated data management system, ECM HubSM, which brings the worlds of energy and carbon management together like never before. The ECM HubSM (short for **E**nergy and **C**arbon **M**anagement Hub) combines Pace Global's proven web-based systems, Energy Zone[®] and ecolink[®], into one seamless solution. The powerful combination of these two landmark systems means that users can efficiently manage energy and sustainability data across their enterprise.

The ECM HubSM is a SaaS solution (software combined with unparalleled service) to manage costs, mitigate risk, and make informed decisions. Uncertainty in the energy markets is the only constant and the ECM HubSM provides a central knowledge platform for managing this complexity. With the ECM HubSM, corporate managers spend less time collecting and trying to organize information; instead freeing them to spend time developing strategies and engaging initiatives that lower cost and create sustained value.

"The ECM Hub enables programmatic reductions in energy costs, complexity, and usage which are the essence of any successful corporate energy program. Plus with energy and carbon so inextricably linked, the ECM Hub provides unparalleled access and transparency to your corporate carbon footprint and sustainability performance," says Kyle Smith, Managing Director – Energy & Carbon Management, Pace Global. "The deployment of ECM Hub is proving to be the equivalent of multiple internal FTE's allowing companies to save money and redeploy their resources to other initiatives."

Whoever said energy and carbon management has to be expensive and time intensive?

The ECM HubSM is provided to facilities at a fraction of the cost of competing enterprise software deployments or internal 'do it yourself' options. With over 9,000 facilities worldwide already gaining a competitive advantage through our platform and a 30-year history as trusted advisors, Pace Global understands the unique challenges faced by corporate managers responsible for energy and environmental management. Pace Global's expertise, combined with our large scale and proven data management processes, enables us to provide an unparalleled value proposition.

A brief video presentation of ECM Hub is available online at www.paceglobal.com/paceglobal/ecm_hub/process.html. For more information or a customized demonstration call Diane Rager at 803.758.2477.

About Pace Global Energy Services, LLC

For over 30 years, Pace Global has pioneered energy and carbon management services that provide strategic direction to industrial, manufacturing, large commercial companies as well as public and institutional entities. Its innovative services support the execution of business strategies, complex energy transactions, asset development, and operations in over 40 countries on six continents. Headquartered outside Washington, D.C., Pace Global represents clients in all segments of the energy value chain. This experience and market breadth differentiates Pace Global's market leading energy and carbon management program solutions.
